THE TOP REASONS WHY BUILDING OWNERS & MANAGERS MODERNIZE THEIR ELEVATORS

- Improved performance
- Enhanced aesthetics
- Codes compliance
- Energy efficient

Even with regular maintenance and repair, your elevators, lifts, and dumbwaiters may need to be replaced or thoroughly modernized. The purpose of modernization solutions is quite simple: to increase the value of your asset by keeping the elevators, lifts, and dumbwaiters running safely and reliably for the lifetime of your building.

Here are just a few examples of the kind of modernization work that we can assist with

A.D.A. Modifications:

The Americans with Disabilities Act spells out accessibility standards for elevators.

- New hall and car stations having location, style, height, and make up, in compliance with the Act).
- New emergency lighting and emergency alarm bell combine to provide:
- In-car illumination in the event of power failure.
- A solution for any trapped passenger(s).
 - A readily operated, hands-free "phone" programmed to provide automatic access to and communication with designated assistance personnel.

Infrared Curtain:

A replacement of the retractable car door safety edge & two beam electric eyes with an infrared curtain is an improvement and safety enhancement that would allow unlimited protection the entire door opening height, such that any obstruction would cause the doors to automatically retract. This system would replace the two beam electric eyes/safety edge that can cause serious injury.

GREEN Benefits:

- Use less electricity during operation, and they generate less heat, which reduces HVAC demands for the hoistway machine room.
- regenerative drives improve the efficiency of existing systems an average of 40 percent
- replacing in-cab lighting to be more energy efficient, retrofitting older incandescent bulbs and illuminated call buttons with money-saving LED units.

Controller & Fire Service Addition:

New controller system: a solid state, microprocessor based, non-proprietary one, employing smoke detectors at the floors and machine room, working in concert with the new fire service I and II additions. The important functions of slow down, leveling, stopping, and direction of travel will come from a car top selector integrated into the system.

MODERNIZATION

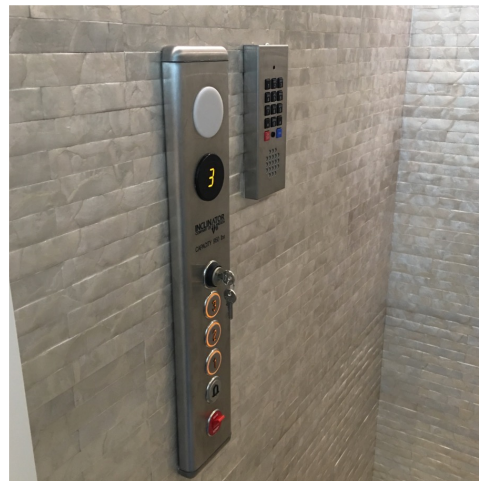

ELEVATORS ARE THE NEXT “MUST HAVE” AMENITY

- ➔ **Home elevator sales in the US have doubled in the last few years and faster growth is predicted in the next few.**
- ➔ **Elevators will become more common given their increased practicality.**
- ➔ **Elevators reduce construction and installation costs by offering a drive system that is housed entirely in the hoistway (elevator shaft).**

Today's Elevators are GREEN

- * **Machine Roomless - Less sq ft and use of construction materials**
- * **Gearless Motor - Longer life span than geared motors**
- * **Slower Motor Speed - Reduced energy consumption**
- * **No Hydraulic or Gear Oils - No risk of soil contamination**
